Tento Resident OS

Remaining owner actions | 24 October 2026

Deployment and the resident login-to-result journey have been verified. Vercel access and sign-in are already completed. Only the following items require your real property evidence or account decisions.

Live application
https://tento-resident-os.vercel.app

1. Provide approved property policies

Supply the actual approved maintenance policies and confirm which trades are available in-house. The assistant can prepare the versioned Markdown, exact citation spans and import checks. Do not use synthetic test documents. Until approved sources are available, the live app will save tickets and safely abstain instead of creating unsupported work orders.

2. Confirm backup and spend settings

In your Supabase account, confirm the real backup retention available on your plan and the intended restore arrangements. In your model-provider account, choose or approve the spend cap and alert recipients. Runtime API keys do not prove these account-level settings, and no paid upgrade was purchased. The assistant can help apply or verify supported settings once those decisions and account access are available.
