TENTO / POLICY DEMO

Demo setup complete.

No policy-source human task is required for this fictional project demo.

This document supersedes the previous request for real-property policy approval. The supplied Maple Court test pack is suitable for an isolated demonstration, with explicit synthetic labels.

Completed

Five normalized policy documents, unique source IDs and checksums; ten exact-source claims; fifteen scenarios; real agent recordings; an evidence/trace explorer; authenticated live reruns; and schema/citation validation.

What the demo does

Visitors can inspect recorded assessments without signing in. Signed-in users can run a fresh model assessment. Emergency cases stop safely. Unsupported or invalid outcomes remain abstentions.

What stays separate

Synthetic policies remain outside the maintenance knowledge index. The demo creates no real ticket, work order, vendor dispatch or notification. Existing resident records are preserved.

Only if this becomes a real-property service

Verified property policies, actual staff/vendor authorization and operational acceptance would be required. Those are future production requirements, not blockers for this project demo.
